security systems

SKU KA.penta.AZ.1007
Producer No. Kaba penta/AZ/1007

The DORMAKABA penta system is a very flexible system and meets the highest security requirements both in the private sector and for large and complex installations. DORMAKABA penta offers a high level of security thanks to the sophisticated technology within the locking cylinder. This is achieved by 5 radial pin rows with up to 22 pin positions. High-quality materials such as low-wear chrome nickel steel for the pins and nickel silver for the key are also decisive. DORMAKABA penta locking cylinders are among the most secure on the market and protect against the most common opening methods. DORMAKABA penta locking cylinders are part of an ergonomically correct reversible key system, which means that the DORMAKABA reversible key is inserted vertically into the cylinder channel.

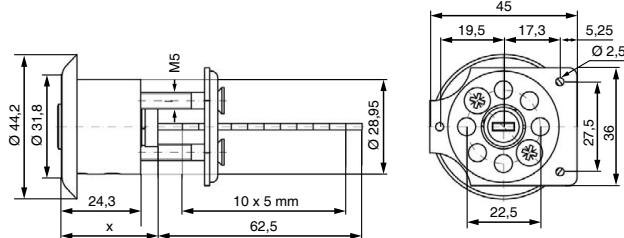

Measurements

- case length: 24,3 mm
- mounting diameter: 28,95 mm
- drilling distance: 22,5 mm

Technical characteristics

- technical and patent copy protection offer high key copy protection
- 5 radially arranged rows of hardened steel pins
- up to 22 pin pairs per cylinder side in several rows on 85 possible positions
- number of possible, theoretical individual blocks: 867 trillion
- spring-loaded pairs of locking elements made of hardened steel, chemically nickel plated
- very high security against picking and the impact method
- core diameter: 15 mm
- modular system design
- drive arm centrally arranged
- patent protection until 2033

Execution

- ergonomically correct reversible key (vertical key insertion)
- easy key insertion due to new design of the tumblers
- cylinder body: nickel plated brass
- integration into electronic DORMAKABA locking systems with LEGIC clip possible at any time (retrofittable), mechanical lock remains unchanged
- can be combined with DORMAKABA evolo mechatronic locking system

Options / Special equipment

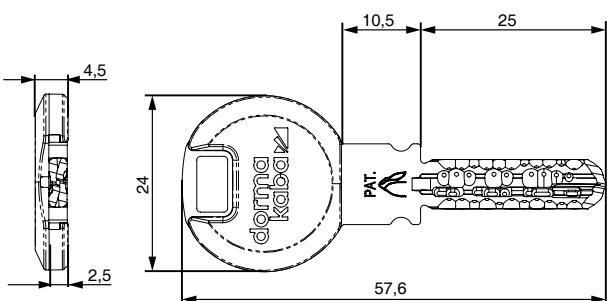

- rosette
- long bow with and without key clip
- attention: An extended drive arm is required for door thicknesses greater than 90 mm! Please ask us for this.

Key

- reversible key made of high-quality nickel silver, low-wear
- reversible key that is technically difficult to copy
- the new coding on the tip of the key cannot be produced with conventional key cutting machines; if the coding is missing, a key cannot be inserted or turned
- high breaking resistance
- 3 different key types, standard key: smartkey (optional largekey, long bow)
- colour clip standard: black (selectable from 12 colours)
- new exclusive colour clips only for the DORMAKABA penta system: in elaborate 2-component plastic technology with glossy surface

Operational area

- outer doors, additional cylinder
- for all additional box locks with a mounting diameter of 28 mm (ABUS, IKON, ...)
- additional box locks are listed under door accessories (Please note: door hinge right or left!)
- private houses and apartments
- small and medium-sized enterprises
- industrial and administrative buildings
- public facilities such as schools or community buildings
- large and complex locking systems

Scope of delivery

- rim cylinder AZ 1007 inkl. 3 or more keys
- 2 fixing screws M5 x 60 mm
- without rosette
- security card

Technical details

Reversible key that is technically difficult to copy

The reversible key is technically difficult to copy. The keys are not coded by drilling, but by a special milling process that conceals the position of the coding on the key. The key is made of nickel silver and is highly resistant to breaking, has excellent sliding properties and lowest wear. New design of the locking elements allow the key to slide even more easily into the key channel.

High security against picking and the impact method

With the rapido method, conventional locking cylinders can be opened - without leaving any traces - with a specially made key and a hammer. The DORMAKABA penta system is protected against this.

DORMAKABA modular

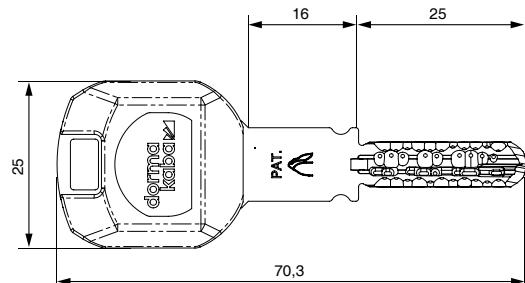

The DORMAKABA modular system allows cylinders to be converted to other lengths or even other cylinder shapes on site with little effort. The locking system remains intact. The inserted cylinder cores (inserts) can easily be used in other cylinder designs (half cylinders, knob cylinders, camlock cylinders, etc.).

Standard drilling protection

The standard drilling protection is achieved by standard hardened steel locking elements and a hardened insert fixing screw.

Largekey (clip and long bow)

- long key bow with extended key neck
- colour clip standard: black (selectable from 12 colors)
- when using e.g. protective fittings with core pulling protection rosette

Long bow (armour bow)

- reversible key with armour bow
- when using e.g. security fittings with core pulling protection rosette and multiple locking systems
